

SAP Business Intelligence audit

→ Reshape your BI solution

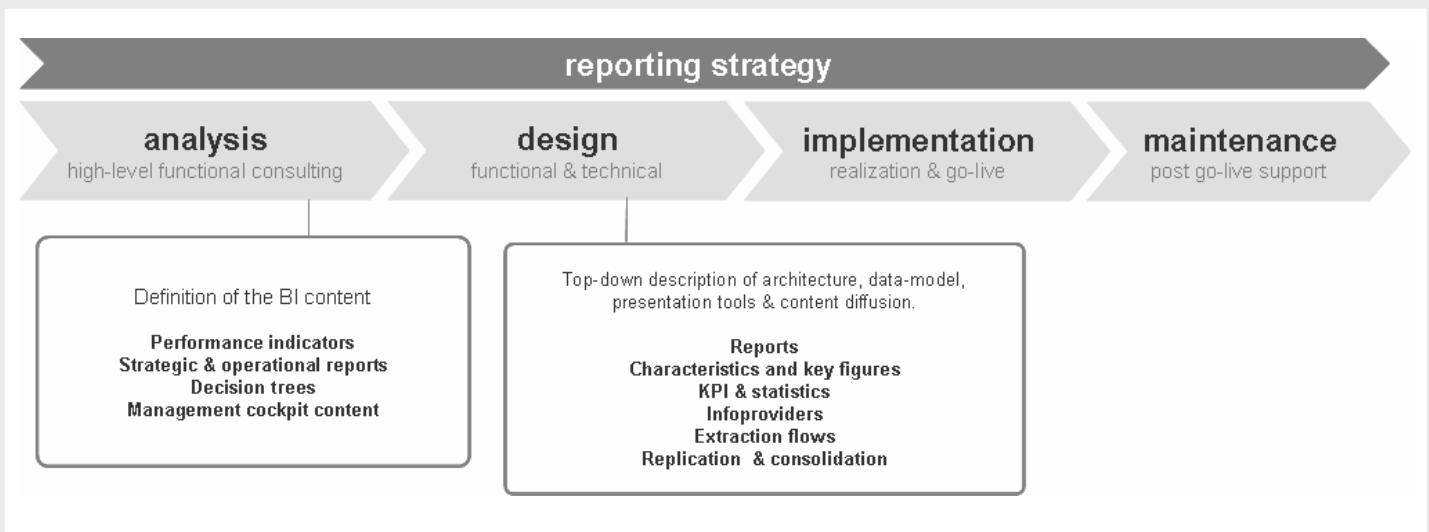

A healthy business intelligence solution is an ongoing challenge : aligning the operational processes with the business strategy and controlling the performance in a constantly changing environment.

Before extending the scope, planning an upgrade or moving to an enterprise-wide architecture, an audit will highlight the risks, measure the effort and recommend optimization.

Intensum offers a unique audit program in order to quickly analyze your BI solution and to maximize your return on future investments.

A typical BI project is composed of 3 major steps : **scoping & objectives**, **design** and **implementation**, but it is obvious that the strategy, the targets and the processes of your company do change after a while. As a result, how and what you monitor evolves at the same speed.

This requires a revision of your existing solution before expanding the number of users, departments, functional areas, or even considering an upgrade of your SAP BI system.

Our experience learns that a BI solution suffers from a number of issues after a couple of operational months/years, issues that disturb the evolution of the data warehouse, such as :

- Performance of queries & reports
- Data quality and duplication of infoproviders
- Non-stable ETL environment
- Gap between business processes & data models
- Undocumented procedures & statistics
- Non-conformity with changed compliance regulations

The **SAP BI audit program** developed by Intensum, offers you the right elements to analyze your existing SAP BI solution and to prepare your environment for future expansion & changes.

The SAP BI audit program comes with deliverables such as reports, metrics, scorecards and matrices, and the methodology focuses on the most important issues your business intelligence system is suffering from :

- the gaps between strategy & processes
- performance issues and data quality
- stability of the ETL process
- BI usage cartography
- data model consistency
- cleansing of data model redundancy
- security, roles & authorizations
- alignment with SAP NetWeaver technology
- conformity with new compliance regulations
- documentation of procedures and implemented content

Typically, the process of a BI audit focuses on one or multiple functional areas (financials, sales, purchasing, etc.) or targets the complete scope at once. If one chooses to analyze multiple functional areas, we also offer an automated analysis of your BI environment by using RBE+ (reverse business engineer from IBIS Prof. Thome AG).

Data model documentation

Recommendations for data model cleansing

Rationalized portfolio of key figures,
characteristics & key performance indicators (KPI)

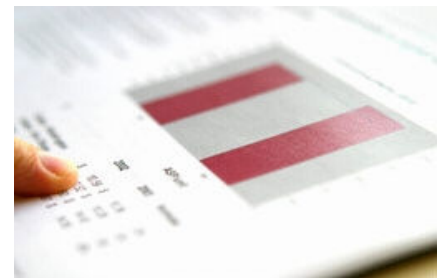

BI usage trend analysis

Performance statistics & optimization guidelines

Upgrade roadmap & validation procedures

ETL optimization advice

Scope extension action plan (functional & technical)

**Get ready for the
enterprise-wide
data warehouse,
SAP BI 7.0 or real-
time business
activity monitoring !**

If you are preparing a SAP Business Intelligence migration, a geographical roll-out, a functional scope extension, an increased BI usage, or simply want to restore the confidence in your BI solution, intensum is committed to deliver value-oriented results with the SAP BI audit program.

Intensum is a European **SAP consulting agency**. We deliver business skills, project management and first-class SAP implementation competencies, focusing on **Financial Supply Chain Management** (SAP FSCM / CFM), **Business Intelligence** (SAP BI / SEM / BPS) and process improvement through **innovative solutions** (SAP NetWeaver, Solution Manager, Reverse Business Engineering - RBE+) and **SAP ERP** (ECC 5.0 & business process platform).
